

Background

Motivation: Single cell and spatial SSL methods rely on contrastive training. Knowledge distillation hasn't been used before. Mainly because cellular augmentation methods haven't been explored.

Using preprocessings as augmentations

... and more (masked encoding, resolution scaling etc)

DINOv2

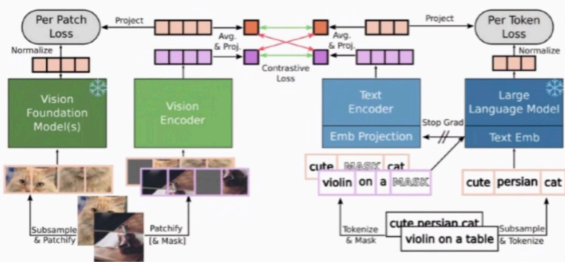

Downstream Tasks

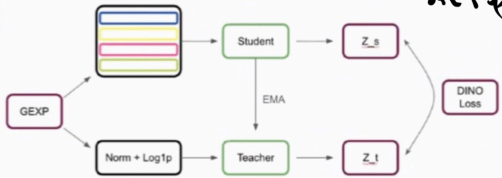

Rushin Gindra

SF-CLIP

Step 1 (DINOmics training)

Contrastive on Top

Step 2 CLIP alignment (SF-CLIP)
